

IDEAL Industries New Line of Drill Taps with SmoothStart™ Tip are Designed for Durability!

November 20, 2017, Ajax ON - IDEAL INDUSTRIES (CANADA) CORP. is excited to announce the introduction of Combination Drill Taps to our tool lineup. Combining the tasks of drilling, tapping and deburring into one, IDEAL® Drill Taps feature a tri-flute design, and Split Point Smoothstart™ Tip, similar to the popular IDEAL TKO™ Carbide Tipped Hole Cutters.

IDEAL Drill Tap Key Features:

- Constructed out of High Speed Steel (HSS) for strength and durability
- Split Point Smoothstart™ Tip that guides the drill tap into the material, minimizing “walking” of the bit, and helping reduce thread damage, extending the life of the bit
- Tri-Flute design - While traditional drill taps have a single or double flute design, IDEAL Drill Taps feature a tri-flute design, providing faster chip removal and helping minimize binding while drilling
- Balanced, hardened tapping edges with a ¼” hex shank, make them compatible not only with cordless drills but also impact drivers
- Performance tested for longevity, strength and durability - offering the best value to electricians.

Available now, IDEAL Drill Taps come in six popular sizes - 6/32, 8/32, 10/24, 10/32, 12/24, ¼-20 – and are offered individually, or in an 8-piece kit. For more information, visit our website, www.idealindustries.ca or contact us via info@idealindustries.ca

When it comes to quality, performance and durability, IDEAL is the Electrician’s Champion.
